

Hi everyone.

Some of you may know that I love using the Plinky synth for sound design, cinematic patches, and I've been posting a lot about it on Instagram.

So here is a preset pack for you guys: 32 presets, my style of Plinky playing. I think you will find some really cool stuff here. It's free of charge, you can find it at plinkysynth.com.

Or if you want to show some love for my content, or my patches, for whatever reason, you can actually buy it for whatever you want on my Bandcamp as well.

Here's my plan with this preset pack: I wanted every patch to be performative. So the A and B knobs are macro controls that will change the sound a lot. I usually turn them down for a start, and then add them in.

I've programmed pretty much every sound with the volume at 9 o'clock. If you turn it way up, it's going to be loud. So start over at 9 o'clock and then adjust to taste.
